

Secure Push-to-Talk Solutions

Connect your workforce with real time voice communications, across the campus or across the country.

Push-to-Talk (PTT) solutions provide real time communications utilizing smartphones, tablets and other devices. PTT can be deployed over Wi-Fi, cellular and legacy Radio Services.

Cross-platform Devices

PTT can be deployed using a variety of devices and operating systems including Android, Apple iOS and Windows platforms.

Mobile Computers

PTT solutions can be integrated into existing scanners used for field service, warehouse, Proof of Delivery devices or mission critical apps.

Dispatching

PTT can be deployed on Windows PC to create a powerful dispatching service that runs with your other applications.

Connect over Wi-Fi and data networks.

Benefits

- Real time workforce communications and collaboration
- Communication with everyone or members of a specific group (one to many)
- Communication with a specific person (One to One)
- Secure communications using digital signature and voice encryption
- Seamlessly communicate over WiFi, cellular data network and traditional Land Mobile Radio Systems (LMRS)
- Keep data and cell minute usage low for cost savings
- See user availability status, reach the people you need
- Playback of missed messages

Specification Highlights

- 1000 participants per channel
- RSA 1024 bit authentication
- AES 256 bit encryption
- Unlimited channels

Service Facts

- Instant live voice, photos and text alerts
- Multiple private user groups
- Remote client configuration
- Cloud hosted or on-site server based
- Use Bluetooth and specialized headsets, speakers and microphones for true PTT radio feel
- 22 languages available
- PTT button on screen or configure a button on the device
