

Facilities rely heavily on inventory counts but often underestimate the cost of doing so. At times, a misplaced piece of equipment can be the primary source of frustration for an operations manager. It can result in a loss of profitability and even delay filling customers orders.

RFIDPro's ASSETracs application is adaptable to most enterprise software solutions and adds value by:

PERFORMING ASSET INVENTORY

A hybrid use of barcode and RFID technologies allow users to inventory assets quickly and efficiently to eliminate common and expensive problems. Through a handheld computer, a user receives feedback on a missing or misplaced item. This real-time information allows for immediate action and correction of the problem, allowing to maintain the most up-to-date information possible.

COUNTING AND LOCATING

ASSETracs allows rapid wall-to-wall counting, and because RFID technology does not demand line of sight, an asset may be located without it's RFID tag being visible, helping facility managers to "find" missing assets.

REAL TIME REPORTING

ASSETracs offers a variety of options for reporting that include Assets per location, Assets per user, Assets inventoried within a time period, Assets NOT-Found, Assets misplaced, as well as additional custom options.

QUALITY CONTROL

Quality Control has never been so easy. ASSETracs ensures all inventory items are accounted for every time. With an array of options for accountability, ASSETracs will help you define the essential elements of inventory tracking and locating within a facility.

The Total Solution: Hardware, Software, Services & Support.

RFID READERS

From the warehouse and loading dock a mobile, handheld or fixed RFID reader can help you achieve maximum visibility into your enterprise assets. Mount fixed readers to specific locations or utilize handheld readers for on the go data collection.

RFID READER ANTENNAS

In combination with fixed readers, antennas deliver high-throughput and high capacity communication, enabling organizations to capture, move and manage critical information to and from every point of business activity.

RFID PRINTING & ENCODING

RFID printers print with traceable RFID tags to optimize supply chain management. From mobile to industrial printers, RFID printers can solve a variety of business applications. Choose from high or low volume printers based on your needs.

RFID INLAYS & TAGS

With access to a wide variety of inlays and tags, let us help you find what you're looking for. Inlays and tags are available in all current frequency standards. Each tag offers a proven design that enables users to reach and sustain high levels of performance for a variety of environments.

RFID SOFTWARE APPLICATIONS

Track items as they move through gateways and instantly transmit data back to your warehouse management or ERP system. Use RFID software to automate check-in / check-out of items, track when employees come and go, trigger an alarm when something leaves that shouldn't, quickly see what's in an area or location, see if an item is where it is supposed to be, and know when something is missing.

PROFESSIONAL MANAGED SERVICES

We want to make sure you fully understand how to use your hardware, software, and technology systems to get the most out of your investment. Let us be your one point of contact - Get the help you need when you need it.

- Authorized Repair Services
- Technical Support & Training
- Wireless Network Installation & Optimization Services
- Device Staging & Configuration
- Managed Services for Printing, Supplies, & Mobile Devices
- Project Management & Consulting
