

# Foxfire Inventory Pro and Work Order Pro

## Web Based Software or SaaS Cloud Solution

Works with Windows Mobile, Apple and Android Devices

**With Foxfire's award-winning inventory and work order software, along with 20+ years of experience in the industry, we can help you implement a solution in your business to better manage inventory, work and labor resources, and become more efficient and more profitable.**

### Inventory Pro

- Create inventory and locations
- Create POs and receive POs for inventory
- Serialized or Non-Serialized inventory
- Generate barcodes for inventory and locations
- Manage inventory and locations
- Utilize WIFI networks, cellular networks, and mobile computers for real-time adjustments
- Utilize ActiveSync batch computing for batch transactions and store and forward
- Move inventory using mobile computers
- Issue inventory using mobile computers
- Cycle count inventory using mobile computers
- Perform physical inventory using mobile computers
- Access basic WMS picking, packing and shipping functions
- Create reports using built-in report engine
- Create user-defined reports
- Export reports to Excel

### Work Order Pro

- Create incoming work order and service requests
- Approve or deny work requests
- Route requests quickly to a field service technician
- Send work orders to the field via cellular to a computer, an iOS device, an Android device, or a Windows Mobile device
- Record field service technician labor hours, parts used and notes for each work order
- Utilize problem and solution codes for quick entry
- Capture field cost and data
- Full reporting on all work order activity

### Quick Set Up:

Foxfire's software can be set up quickly so you can start realizing the benefits immediately.

### Experience:

Foxfire's solutions are deployed in numerous industries, including, but not limited to, municipal / state / local / public sector, apparel, food / beverage, electronics, telecommunications, manufacturing, traditional retail, e-commerce retail, non-profits, third party logistics, public warehousing, and wholesale distribution.

### Technologies Utilized:

The main system computing platform is web based and can be accessed by most browsers with nothing to install on the workstations.

Foxfire offers SaaS or on premise deployments. The mobile computing platform has multiple options and can be accessed via Windows Mobile devices, Apple iOS devices, Android devices or any other device with a webkit enabled mobile browser platform.

The server can be hosted by Foxfire or run locally by the customer or a third party. Foxfire uses Microsoft SQL Server as the database platform

### Integration To Other Systems:

The system can be run stand-alone or interfaced with other key client business systems. Foxfire's years of experience in the industry can be leveraged to connect all business systems and warehouse automation to Foxfire, as needed.

### Industry Experience:

Foxfire has deep experience in many industries, including support for finished goods inventory, raw materials inventory, and work in process (WIP) inventory.

### The Foxfire Partner Network:

Foxfire works with a network of local partners, managing all software, hardware and media needs. Give us a call and we will have one of our local partners visit your operation and see how we can help you.
