

Mobile Voice Productivity

Plus...WMS Automation

Changing the economics of voice productivity — turning your WMS apps into...*Super Apps*.

Voice Productivity and Power Automation

We've Changed the Economics of WMS Voice Productivity

Affordable DC Workforce Voice Productivity, Cutting Costs, Improving your Bottom Line.

AccuSpeech **Mobile**® changes the economics of voice productivity with an *intelligent, completely mobile voice and automation solution* that can transform and optimize your existing supply chain operations, without changing your applications or risking your existing IT investments.

AccuSpeech **Mobile** starts by voice-enabling your existing WMS applications solely from your mobile devices, using its voice-intelligent client technology, that eliminates completely any need for costly server-based integration, leaving your all your existing applications untouched. Any or all of your WMS apps can be fully voice optimized and automated...

WMS Voice Productivity & Automation Completely Powered From Your Mobile Devices.

... **without changing a single line of WMS code.**

Where ever you want the speed of voice in your supply chain, from picking to cross-docking, inventory to receiving, warehouse to retail or manufacturing, you can now get the voice productivity you've wanted but could never cost justify.

Power-Automate Your WMS Applications, Turning Them into *Super Apps*

Powering your application with mobile voice productivity is just the start.

AccuSpeech **Mobile's** advanced power-automation capabilities further empowering warehouse workers, speeding transaction **using a single voice utterance to trigger automation sequences that circumvent time-consuming screens, navigation steps, key strokes and session changes** – and execute complex system-wide transactions and processes in seconds.

Streamlining your business processes no-longer requires expensive professional services to change your WMS application code. You can automate your business processes quickly – without changing your WMS code – protecting and optimizing your existing distribution and IT investments.

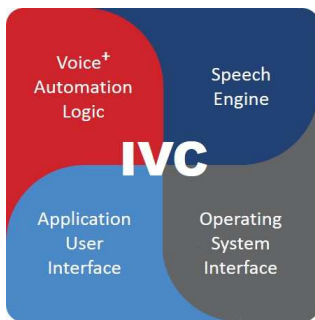

The AccuSpeechMobile Solution

The AccuSpeechMobile Voice+ Automation Solution leverages an innovative device-based architecture and patented automation technology to deliver powerful voice capabilities and advanced automation functions, to existing warehouse or field service applications -- that maximize productivity and further optimize your mobile workforce applications.

The AccuSpeechMobile Voice & Automation Solution consists of two powerful components – the **Mobile Intelligent Voice Client** and the standalone **Voice+ Automation Console**.

The AccuSpeechMobile Intelligent Voice Client (IVC) is patented device-based voice mobile software that wirelessly delivers voice functionality and application automation to your existing mobile application. When customized to support your mobile applications, the IVC delivers sophisticated capabilities that increase mobile worker productivity while allowing mobile workers to maintain visual and manual focus on their immediate tasks, improving personal safety.

The Voice+ Automation Console is an easy-to-use, wizard-based, rapid development environment that allows organizations to quickly voice-enable and automate for their existing mobile applications. Rapidly — in just a few days — and ongoing voice-changes can be implemented in only a few hours.

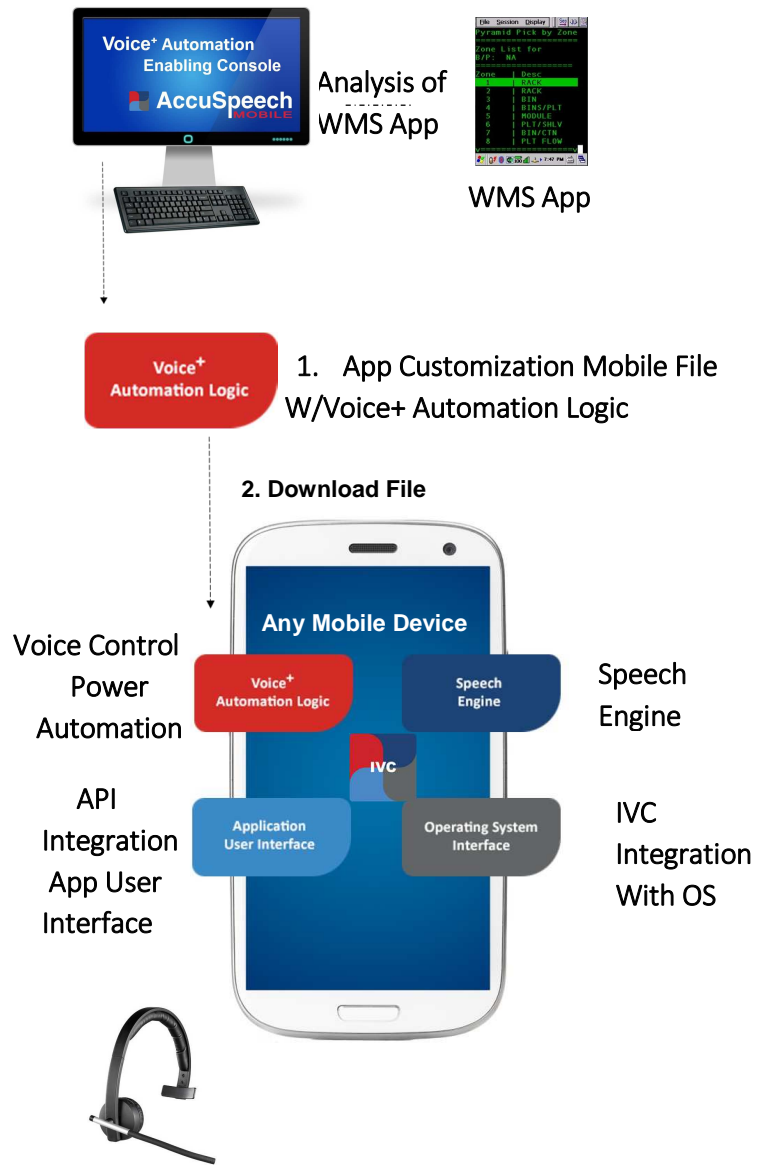

The AccuSpeech Mobile Solution

The laptop-based Voice+ Automation Console's wizard-based menus and advanced AccuLogic, allows the customers to quickly create a mobile voice and automation customization file (1) Voice+ Automation Logic File) that when down-loaded (2) with the mobile Intelligent Voice Client wirelessly delivers all the voice productivity and automation necessary to optimize your mobile workforce application.

All voice productivity controls and automation commands are delivered through the mobile customization file (1) once uploaded to the device the Intelligent Client. No changes are made to your existing application's code or processes.

Because the Voice+ Automation Console has saved all your projects, when you make changes to your mobile application or business processes, the corresponding voice-change process is extremely fast. The Voice+ Automation Console is so easy to use that it requires no outside IT consultants, giving your organization complete control.

The AccuSpeech Mobile Solution

Distribution professionals no longer need to be saddled with the decades-old, antiquated and expensive server-based model for voice productivity. You can avoid being cornered with the risk vs. reward scenario over old voice technology that is costly to acquire, complex to deploy, and disruptive to existing business processes

“...power-automation...a single voice utterance executes multiple application functions... automatically by the mobile device, eliminating human intervention... further reducing errors.”

Now industry leading companies everywhere are embracing the logical choice of contemporary mobile-intelligent voice and automation technology powered by a variety of mobile devices and operating systems. AccuSpeech *Mobile* changes the economics of productivity -- advancing operational performance, distribution speed, accuracy and business profitability.

“The ability today to voice-enable existing warehouse applications and workflows (as opposed to deploying a dedicated solution requiring substantial middleware, coding, and integration overhead) represents one of these significant advances”
