

CYBRA EdgeMicro

A simple solution that solves many common issues in logistical & inventory management.

EdgeMicro Capabilities

- Import and Export .CSV files
 - Create your own file structure.
 - Define your own data Import/Export file, by naming your own columns.
 - Append or Replace data files.
 - Manage your own serial numbers for Encoding.
 - Test and Diagnose RFID tags as a QC function.
 - Display UPC, Tag maker, Chip type, Model
 - Excellent function to have by your RFID Printer System.
 - Set your own Read Power and Session Type to meet the needs of your Close range or Long range application types.
 - Read a UPC barcode, and Encode an RFID tag, with proper encoding.
- Excellent for replacing bad tags and exception functions.
- Supports all of the GS1 Standards.
 - SGTIN, SSCC, GIAI, GID, GRAI, SGLN.
 - Name the Operator Interface Buttons to Any Language of your choice.

Overview:

Seek and find specific items in hidden or misplaced locations. Count all of the Items in a group, without touching each one. Save counted reads, in a file, you Name, and email. Validate Tags from Service Bureaus, and in house printer. Encode and Enable RFID tags on Demand. Use RFID tagged items to generate a summary report of what is in the case. Generate sales report by customer. The tags we use are the smallest RFID tags available so EdgeMicro can be used on a wide range of items like jewelry or tools.

EdgeMicro is easy to use, easy to implement, and brings immediate results to your operation.

- » Low cost of Entry into RFID capability.
- » There is No Client, Server Software to buy.
- » Does Not require Cloud service and subscription fees.
